

Community perceptions of COVID-19 Prevention and Control Measures in Nigeria and Sierra Leone: multi-site, community-led qualitative study

Aminu Mohammed Anka, Health Promotion Manager, MSF Zamfara Secondary Healthcare Project, OCA Nigeria Mission
Emily Briskin, Epidemiologist, MSF OCA Nigeria Mission (former); Operational Research Advisor, LuxOR, MSF OCB (current)

May 2021

The authors declare no conflicts of interest

Background and Rationale

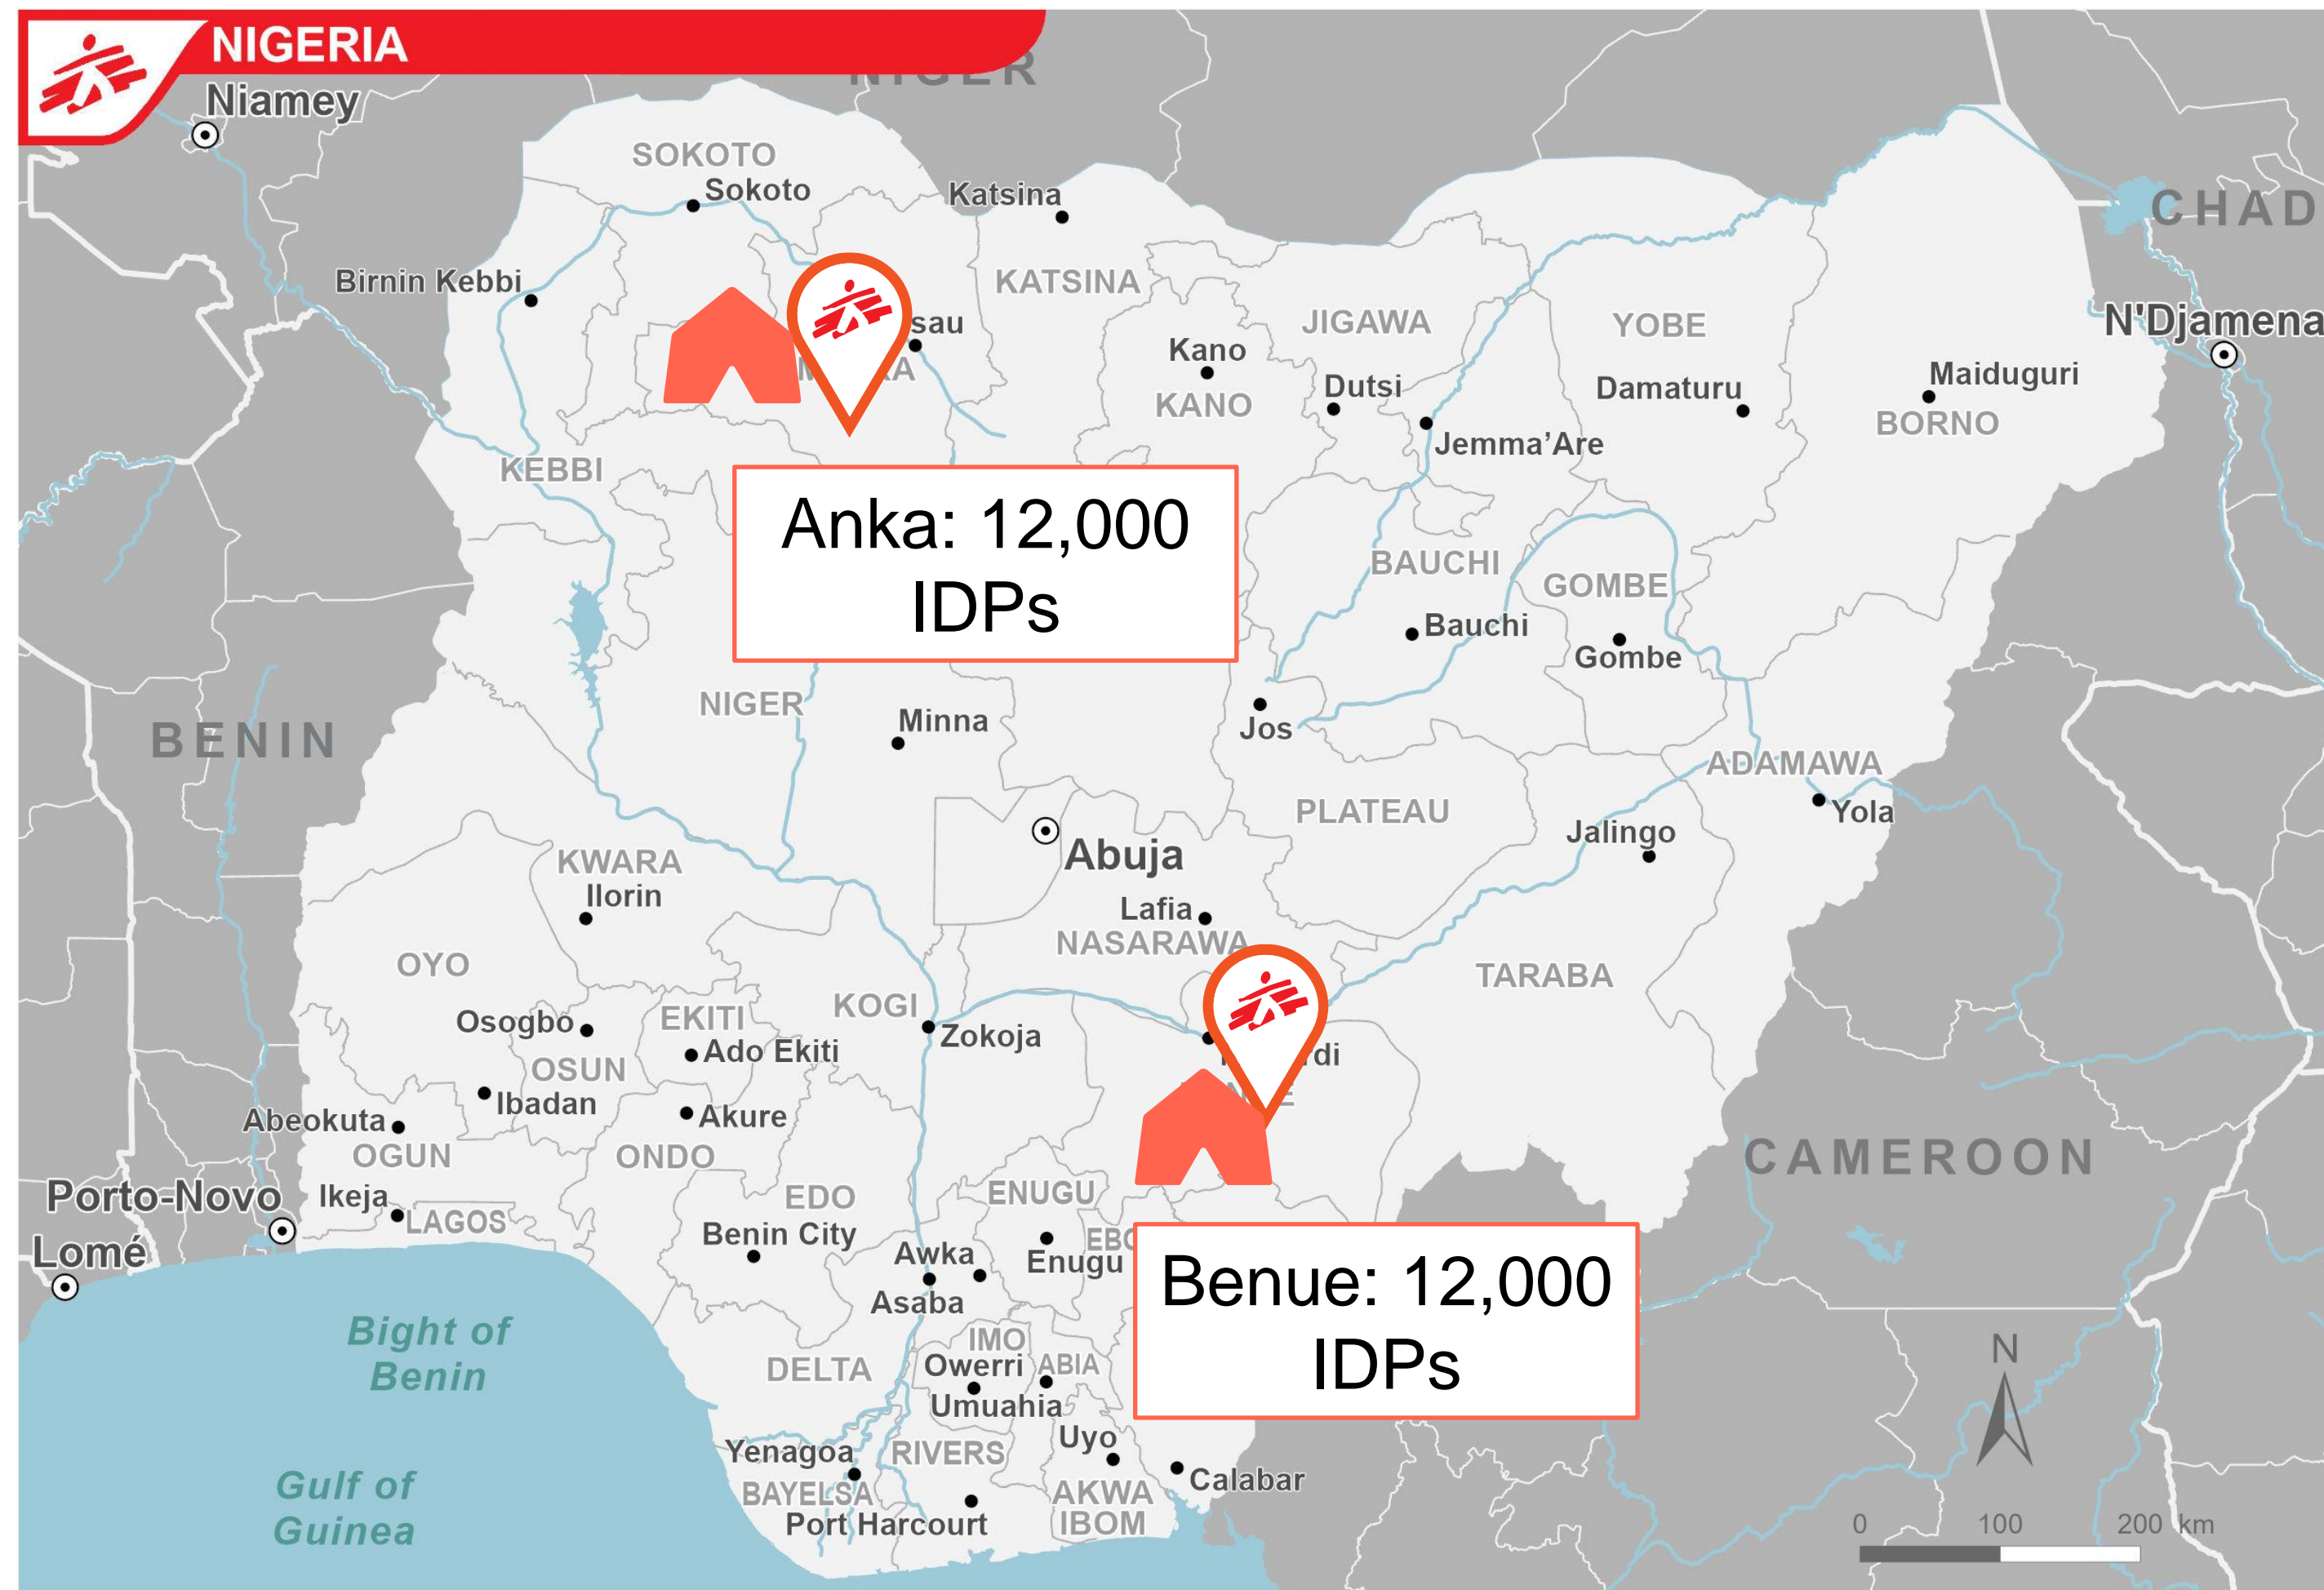

- Previous disease outbreaks:
 - Indirect impacts on health system
 - Critical role of community response
- April 2020: Will “shielding” be acceptable to the community and feasible in this context?
- If not shielding, then what? → Broad approach
- Co-design activities that will actually be accepted

Setting: Internally Displaced Persons Camp

Shelters in MSF-supported IDP camp, Anka

Methods: iterative series of interviews

This study was approved by the MSF Ethics Review Board and by the Ethical Review Boards of Benue State, Nigeria, Zamfara State, Nigeria, and the District Health Management team, Tonkolilli, Sierra Leone.

Results: Key Themes

Nigeria

Sierra Leone

Guidance of elders
and leaders

Fear of seeking healthcare
(previous Ebola
experience)

Localised solutions

**Both
settings**

Maintaining and sustaining life
Non-COVID health issues

Nigeria

Results : IDP

Guidance of Elderly + Leaders

“Even if they will cut my neck I will still have to go and see my mother, we need to see them every day.”—CH1

“When there is a measles outbreak in a certain community, the leader will say don't go to that other community because we know there is a problem.” —BCM3

Anka IDP camp

Sierra
Leone

Results : Rural village setting

Ebola experience, localized solutions

“Involving our own brothers in the system will reduce fear within the people, so that ah my boy, my child...he will bring information to me so I will have no more fear.” – SLIDI4

“People would be scared of going to quarantine, because you think when you go there you will be dead- there is no cure.” – SLIDI6

**Both
settings**

Results : Both settings

**Maintaining and sustaining life
Non-COVID health issues**

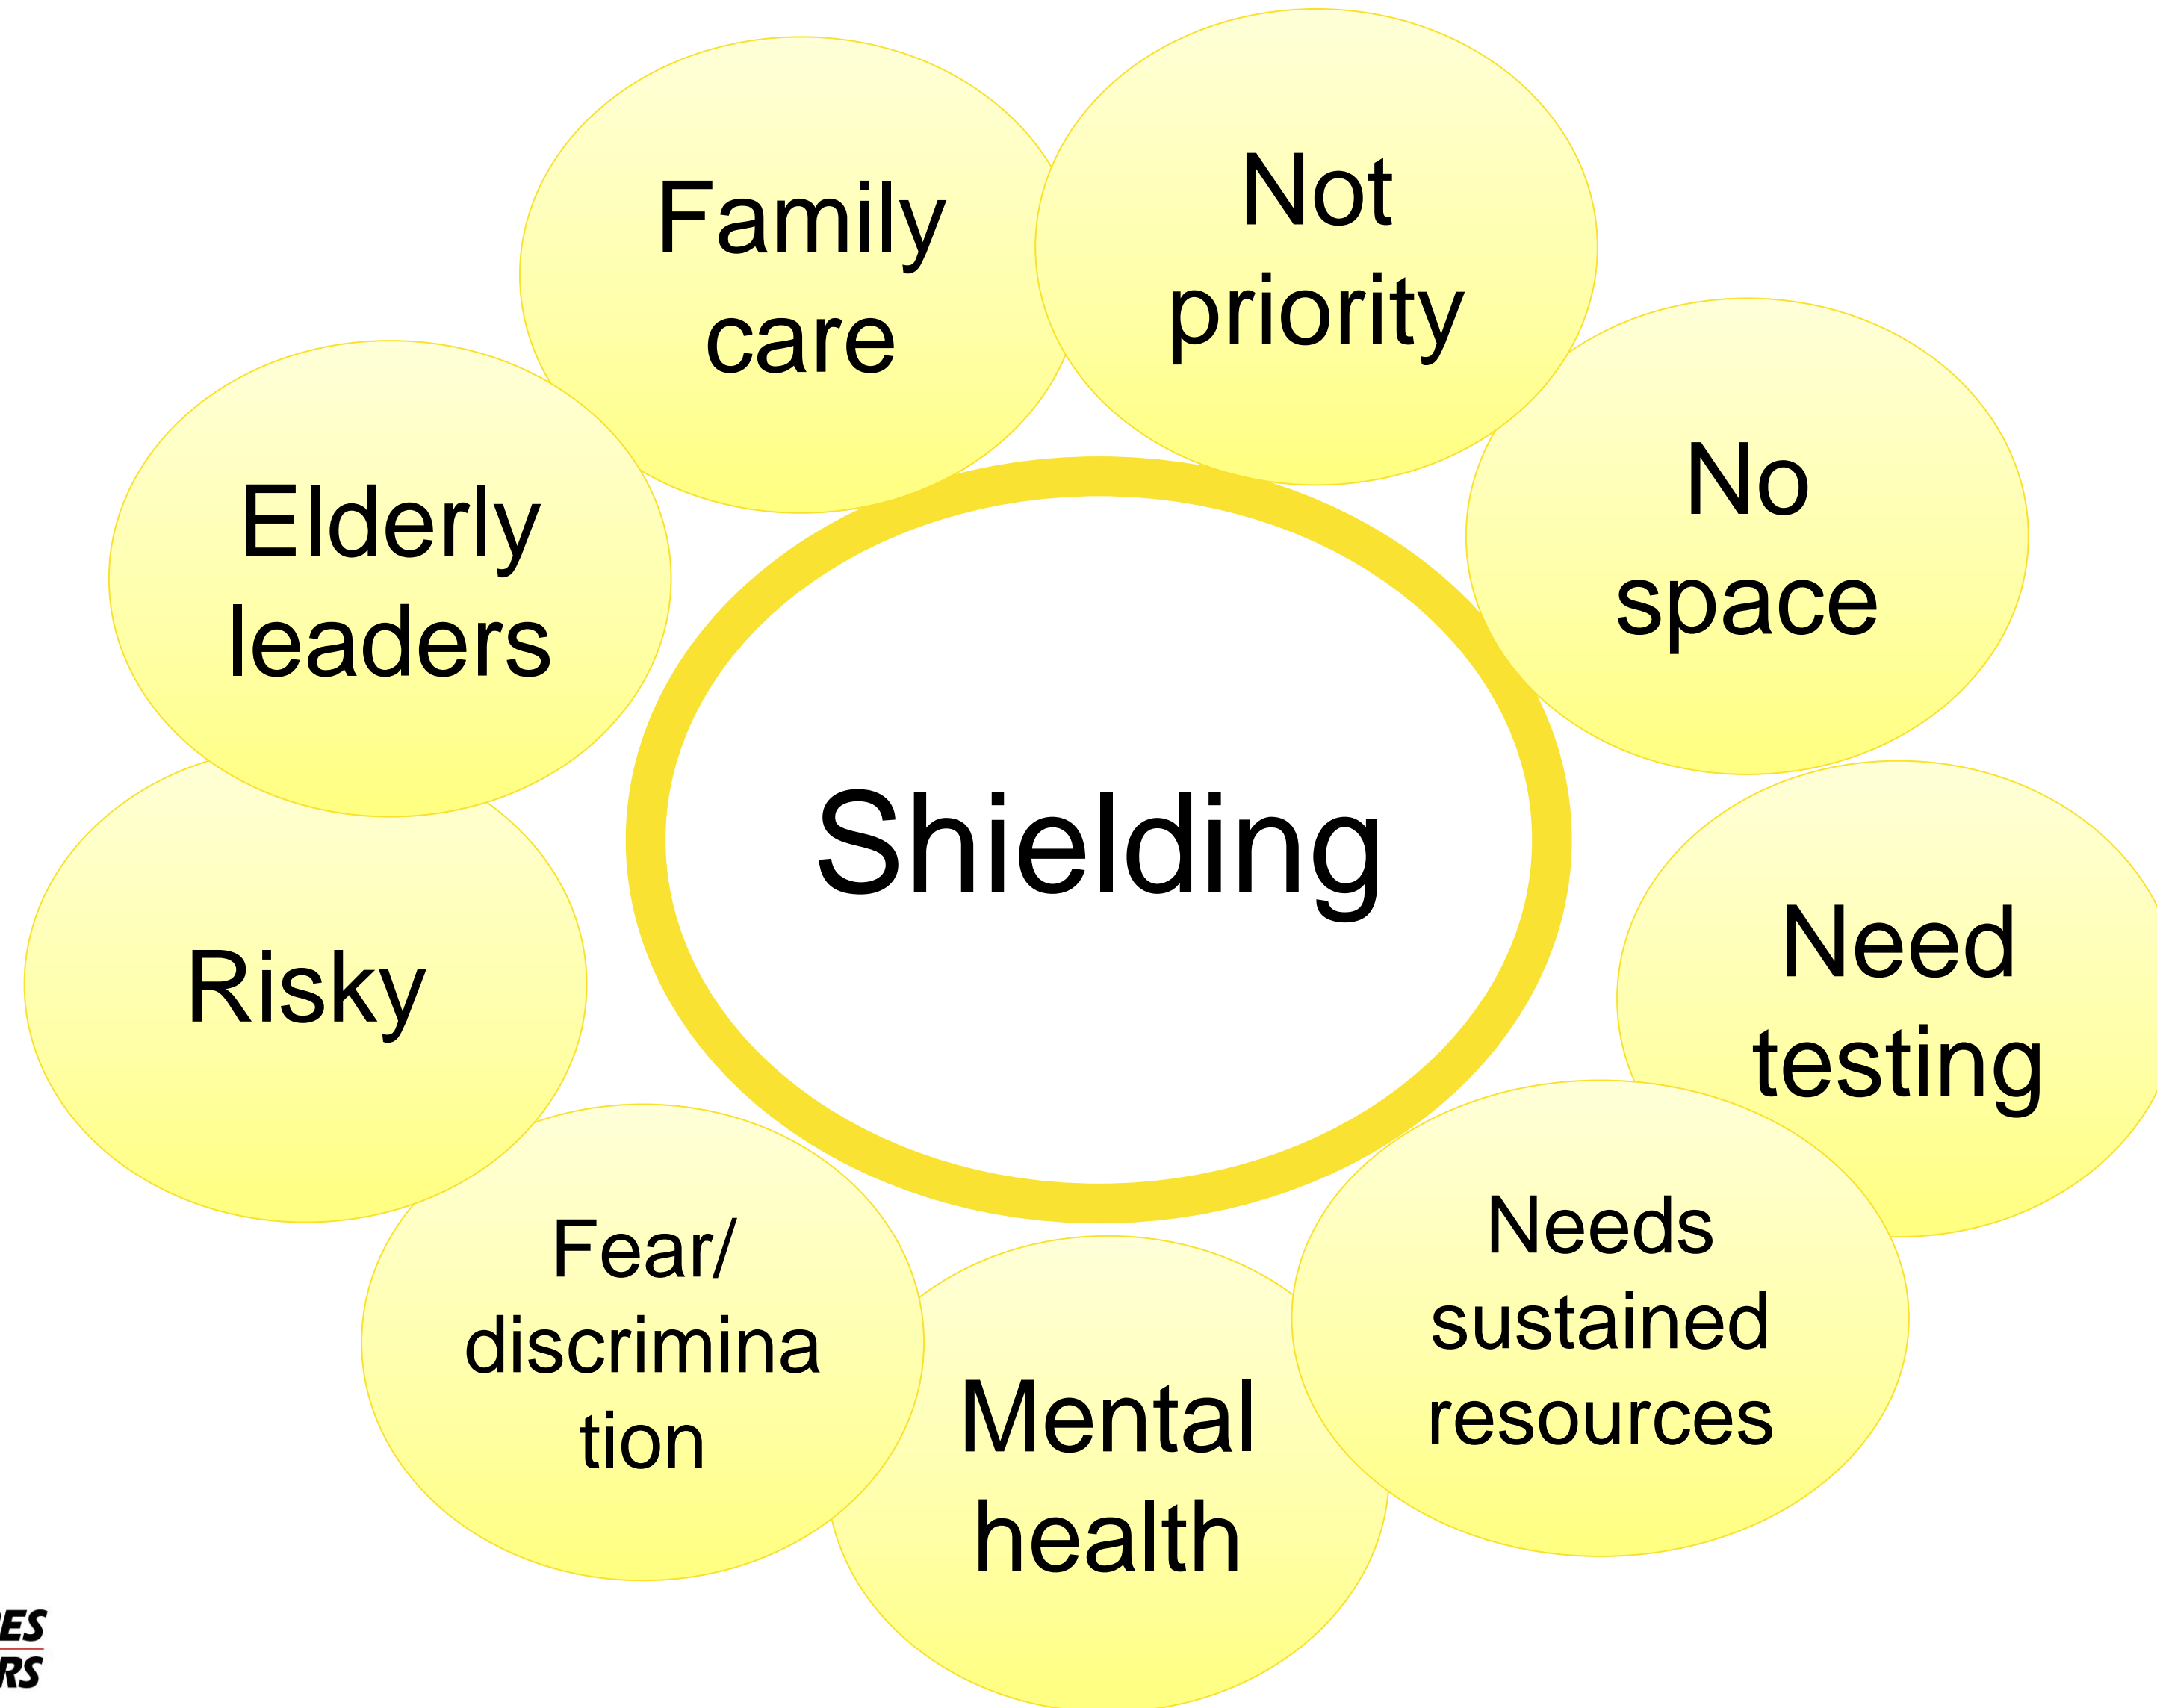

“Child abuse causes most of the teenage pregnancies in our community...lockdown makes them more vulnerable” – SLIDI7

“If markets are closed then our daily survival has ended” – SLIDI7

“There should be general tests carried out in the camp, reason being some persons might have other diseases aside from COVID-19” – ACL4

Results: Feedback on shielding

Results: Acceptable public health measures

“Use of face masks is very important not for COVID-19 prevention only, but for the other airborne related disease.”- ACM

“The health personnel, because they have protective equipment, they should come to the house and the person should not come to the clinic.”– BCM1.2

*“Handwashing should be the rule at each household”
– SLIDI6*

Multiple rounds of interviews

Option	Acceptable to community?	Feasible and implemented?
“Shielding” (separation of elders from others)	?	✗
Food relief incentives for all IDPs to minimize movements	✓	✗
Organize smaller markets	✓	?
Community and HPs at front of response	✓	✓
Modify distributions to minimize crowds/ contacts (IDPs)	✓	✓
Reinforce number and maintenance of latrines, handwashing points, etc.	✓	✓
Offer mobile healthcare	✓	✓
Capacitate local tailors to make cloth masks	✓	✓

Limitations & Conclusions

- Limited sample of interviews in short time period
- Developed agile methodology (real-time analysis to inform operations)
- Piloting experience in Nigeria and Sierra Leone informed assessments in 13 settings across MSF operations
- Communities are experienced dealing with multiple crises
- Timely consultation of community to inform operations
